

Modern methods in reaction kinetics (KDIT98)
syllabus

Lecturer: Dr. Dezső Horváth (horvathd@chem.u-szeged.hu)

Critical discussion of scientific articles in the field of reaction kinetics with modern methods.

Selected scientific papers published in the previous two years are distributed to the students. The students have to give a short presentation on the paper (2-3 presentations per students) where the methods and results are discussed by the group.

Grades are based on the quality of the presentations and the participation in the discussions.
